Statement of participation

Oluwaseun Ajayi

has completed the free course including any mandatory tests for:

Obesity: balanced diets and treatment

This 15-hour free course studied obesity, now a cause of concern among health professionals, exploring the dietary, physiological and genetic aspects.

Issue date: 12 January 2024

COURSE CODE: **SK277_2**

Obesity: balanced diets and treatment

https://www.open.edu/openlearn/science-maths-technology/biology/obesity-balanced-diets-and-treatment/content-section-0

Course summary

The incidence of obesity is on the increase in affluent societies, and the phenomenon commands increasing attention from health professionals, legislators and the media. This free course, Obesity: balanced diets and treatment, looks at the science behind obesity, examining the dietary, physiological and genetic aspects of the topic.

Learning outcomes

By completing this course, the learner should be able to:

- list the six key nutrient groups and explain their role in a healthy diet
- understand and calculate body mass index (BMI), and use such calculations to predict desirable weight ranges for individuals
- explain the importance of a balanced diet in terms of energy intake
- explain how genetic and environmental variables may interact to produce variability in human body weight and adiposity both within and across generations
- apply an understanding of gene–environment interactions to possible explanations of variability in body weight and adiposity.

Completed study

The learner has completed the following:

Section 1

The components of a balanced diet

Section 2

Genes environment and the causes of obesity
