

Statement of participation

Oluwaseun Ajayi

has completed the free course including any mandatory tests for:

Pain and Aspirin

This 9-hour free course looked at what happens in the body's chemistry that allows us to feel pain and how drugs such as Aspirin work to offset this.

Issue date: 29 December 2023

www.open.edu/openlearn

This statement does not imply the award of credit points nor the conferment of a University Qualification.
This statement confirms that this free course and all mandatory tests were passed by the learner.

Please go to the course on OpenLearn for full details:

COURSE CODE: **SK185_1**

Pain and Aspirin

<https://www.open.edu/openlearn/science-maths-technology/biology/pain-and-aspirin/content-section-0>

Course summary

What causes pain and how do we stop it? This free course, Pain and Aspirin, looks at how the human body responds to the release of certain chemicals and as a result feels pain. Pain can be reduced by inhibiting the formation of such chemicals and you will learn how the molecular structure of aspirin has been formulated to help in this process.

Learning outcomes

By completing this course, the learner should be able to:

- demonstrate general knowledge and understanding of some of the basic facts, concepts and principles relating to the development of medicines
- demonstrate knowledge and understanding of the science behind the development of some drugs to achieve particular tasks
- demonstrate knowledge and understanding of how chemical bonding determines the properties of compounds and provides an explanation for the mode of action of drugs
- apply this knowledge and understanding to address familiar and unfamiliar situations
- express unit concepts in an objective and factually correct way.

Completed study

The learner has completed the following:

Section 1

Why does it hurt?

Section 2

How does it hurt?

Section 3

The aspirin story

Section 4

The molecules involved

Section 5

Some chemistry involving esters

Section 6

How does aspirin relieve pain?

Section 7

Enzymes

Section 8

Enter aspirin!
